Profile

Computer Science undergraduate, well versed across software development, desktop systems and machine learning applications. Experienced in developing full-stack web applications and desktop-based management systems using C#, Python, Xaml and SQL, Practical academic projects include building a restaurant management system software, developing a predictive analytics model for stock market trends, and creating a responsive website for a local business.

Education

Bachelor in Computer Science, MILA University.
CGPA: 3.41
October 2022 - 2025

Pearson Edexcel Advanced Level
1A, 2B, 1C.

Languages
Fluent in English and basic Italian.

Technical Skills

Programming languages
C, C#, Xaml, HTML, CSS, Javascript, PHP, Java, SQL, Python.

Frameworks
React, Flask.

Tools & IDEs
CodeBlocks, Sublime text, Visual Studio 2022, .NET, Xampp, Microsoft Office, Gimp, Jupyter Notebook, VS code, PhpMyAdmin.

Soft skills

- Teamwork and Collaboration
- Good Communication skills
- Adaptability and Flexibility
- Certificate in International Relations

Projects

- **Restaurant Management System**

Built a desktop app with Visual Studio, C#, and XAML to make restaurant operations smoother. It handles orders, stock, bills, and reports, using SQLite to keep data safe and easy to get. Thanks to this, daily jobs like placing orders, getting food, and managing stock got simpler with one main system.

Experience

Six Digit Club Sdn. Bhd.

(July 2025- Oct 2025)

Worked as a Full Stack Web Developer intern contributing to two company web development projects.

- **An automated crypto trading bot** built with Flask (Python) and React. Responsibilities included developing backend APIs, integrating trading and analytics features, and ensuring responsive, user-friendly interfaces.

- **A crypto analysis website** offering real- time market insights. Responsibilities included developing backend APIs, building frontend components, and managing the server.

Freelance Web Developer

(March 2026 – Current)

Currently building a tourism website for a client. Using React, Laveral, and MySQL development stack. Currently temporarily deployed through GitHub pages.
