Profile

I'm a Full Stack Developer with a Computer Science background, and I enjoy building things that actually work well in real-world situations. I tend to lean more toward backend development, APIs, and data-driven systems, mainly because I like the logic and problem-solving side of it.

I've worked on a mix of projects, including a restaurant management system, a tourism website for a real client, and a crypto-focused web platform where I built features around real-time data and user interaction. Along the way, I've gotten comfortable working across different parts of a system and building clean, scalable solutions using React, Flask, C#, Python, and SQL.

Experience

Six Digit Club Sdn. Bhd.

(July 2025- Oct 2025)
Kuala Lumpur, Malaysia

Worked on an automated crypto trading platform and a real-time crypto analysis system, both focused on handling live market data and user-driven analytics.

- Developed and maintained RESTful APIs using Flask to support trading operations and real-time data processing
- Built responsive React components for key platform features, improving usability and consistency across user workflows
- Implemented structured logging and data handling systems for trading activity, enabling analysis of bot performance
- Collaborated on full-stack development within a team environment, contributing to scalable architecture and feature delivery

---

Freelance Web Developer

(March 2026 – Current)
Remote

Developing a full-stack tourism platform for a client, focused on structured content, scalability, and interactive user features.

- Currently designing and building a full-stack web application using React, Laravel, and MySQL
- Implemented a data-driven content architecture, enabling dynamic generation of destination and article pages without hardcoding
- Built a multilingual-ready structure to support future internationalization
- Delivered a responsive UI with consistent performance across desktop and mobile devices.

Education

Bachelor in Computer Science.

MILA University.
Nilai, Malaysia
CGPA: 3.41
October 2022 - 2025

Pearson Edexcel Advanced Level

Languages

English: Native

Italian: Conversational

Technical Skills

Programming languages

JavaScript, Python, SQL, C#, PHP

Frameworks

React, Flask, .NET, Laravel

Tools & IDEs

Git, GitHub, Linux, VS Code, MySQL, Xampp

Work Authorization

Italian Citizen (Eligible to work in EU)

Projects

Tourism Website *(Freelance Project)* | ***Tech**: React, Laravel, MySQL*

Developed a modern content-driven platform with dynamic routing and reusable components. Built interactive maps and structured destination data system. Designed scalable architecture for future expansion and multilingual support.

Astra Bot (Automated Crypto Trading Platform) (*Internship Project - Six Digit Club)* | ***Tech**: Python, Flask, React, MySQL*

Developed full-stack features for a crypto trading platform managing automated strategies. Built APIs and frontend tools for bot management, analytics, and financial tracking. Implemented reusable bot configuration system to improve user efficiency. Designed scalable architecture to support real-time trading workflows.,

Crypto Analysis Platform (*Internship Project - Six Digit Club)* | ***Tech**: Python, Web Scraping, APIs, React*

Internship Project - Six Digit Club, Built data scraping pipelines to collect and process blockchain data from multiple sources. Implemented authentication systems (login/register) for secure user access. Structured raw datasets into usable formats for analytics and reporting. Contributed to frontend improvements to enhance accessibility and user interaction.,

Restaurant Management System (*Final Year Project)* | ***Tech**:* C#, WPF, SQLite

Built a desktop application to manage orders, billing, and table operations. Implemented real-time workflows between waitstaff and kitchen. Designed role-based access control and structured SQLite database.,
